FULL STACK WEB DEVELOPER

Egypt, Cairo 
(+20) 01154557909 
mahmoud.a.developer@gmail.com 

OBJECTIVE

I am a software engineer/Full-Stack Developer with a strong interest in web development, I am excited to build a career in PHP (Laravel) and React.js. I have a solid foundation in programming concepts and have completed courses and personal projects in web development.

I have very good problem-solving skills and a passion for developing elegant and efficient solutions. As a team player, I am committed to collaborating with colleagues to deliver high-quality work that meets the needs of users. I am enthusiastic about contribute my skills and talents to a dynamic and innovative team.

WORK EXPERIENCE

University Attendance System | [Upwork](#)

It's a university attendance system built with Laravel and ReactJS. What is making this project unique is I used AWS face recognition service to allow both the teacher to open the lecture with his face, and for the student to attempt the lecture using either his face or his barcode on the card, it has a bunch of features for example after the end of the lecture a CSV file is being created with the details of the students that attempted this lecture and then sent to the teacher via email and a lot more.

Istikamah Company website | [Upwork](#) | [Preview](#)

It's a multi-language company profile that displays information about the company, team, and services and a blog system where they can write blogs about things related to law to get more visitor that will result to more clients. Everything is customizable throw the dashboard the can add, edit, update and delete any resource. It's also SEO Optimized with important meta tags for Search Engines to read and recommend it to users. SEO is also editable via the dashboard.

partpal | [Preview](#)

It's an ecommerce store with great dashboard, It has all ecommerce feature along with some unique features which are bulk upload, and Update for products via excel sheet, if a product in the excel sheet has a category or sub category that does not exist on the website it gets added automatically, and again It's fully SEO Optimized and everything is Editable from the dashboard, in this website I have integrated two payment gateways [Stripe, PayPal].

Laravel Starter project | [Github](#)

A Starter Kit for ecommerce that helps me skip the repetitive work like setting up the multi authentication for different users and admins, and setting up the database for products, categories, sub categories, I have also added bulk uploading feature for products, I set everything up like the home page, shop page, ...etc., and also the dashboard that represent and control everything Important SEO setting for any ecommerce site.

Firefly III theme | [Upwork](#)

I have changed this theme of Firefly III dashboard to another one from themeforest the challenge here is that they are using another template engine it's called twig I had no experience with it but I have learned it and I delivered the project to the client even before the deadline.

Expenses Management API Integration | [Upwork](#)

The backend is built with python, I have integrated 32 API endpoints into React Dashboard.

CURRENT JOB

I Am Working as a Full Time Freelance on [Upwork](#)
